

HydroClear™ Heterotrophic Bacteria slow release dissolvable blocks contain a proprietary blend of 5 bacteria strains that produce multiple enzymes for phosphate control and sludge removal in Koi ponds, water gardens, Hybrid Ponds™, and CrossOver Ponds™.

Pre-measured 1 oz. dissolvable blocks that contain no binding agents or harsh chemicals. Bound by compression only, they are unique in that they immediately sink to the bottom of the pond to go to work on the bottom of the pond.

HydroClear™ Heterotrophic Bacteria Dissolvable Blocks are recommended for use in all seasons - Spring, Summer, Fall, and Winter. The blocks sink to allow the bacteria and the enzymes they produce go to work breaking down organic debris and sludge from the pond's bottom. Can be used in conjunction with other HydroClear™ Bacteria products.

The Dissolvable Blocks are a compressed salt powder that slowly dissolves and leaves no residual byproducts.

Active ingredients:

Bacillus subtilis, B. licheniformis, B. amyloliquefaceans, B. megaterium, and B. brevis bacteria that produce, among others, Protease, Amylase, Ligninase, Lipase, Esterase, Cellulase, Xylanase, and Urease enzymes for the break down and metabolization of problem causing pollutants that cause sludge and muck.

Formulated to metabolize fish and wildlife waste as well as problem causing phosphate, protein, cellulose, lignin, carbons, phosphorus, glucose, sucrose, nitrate, nitrogen, and carbohydrates.

Sludge, muck, and water quality problems in aquatic ecosystems are caused by fish and wildlife waste, leaves, needles, twigs, bark, grass clippings, blossoms, pollen, dust, and others. HydroClear™ Heterotrophic Bacteria Dissolvable Blocks are specially formulated to metabolize these and other pollutants for unsurpassed water quality, clarity, and fish health.

Drop directly into the pond - not directly into the biological filter.

Application rates:
1 block per 100 square feet of pond bottom surface area.

Monthly during Fall and Winter months.

Weekly during Spring Months.

Bi-weekly during Summer months.

Dosage may be increased if high nutrient loads are present.

Store in dry, cool place.

Wash hands after each use.

DO NOT EAT.

24447

- Sinking, slow release formula
- Digests fish waste
- Digests leaves, needles, grass clippings, sludge, and muck
- Breaks down phosphates and nitrates
- Metabolizes proteins, cellulose, carbohydrates, and lignin
- All natural - no chemicals
- Promotes clean, clear, healthy water
- Promotes proper fish health
- 2 Year Shelf Life
